

New 2RU Zephyr/IP joins Z/IP Mixer at NAB

April 6, 2009, Cleveland Ohio, USA

The best keeps getting better, and more compact. Telos Systems will be showing the new, smaller 2RU rackmount Zephyr/IP and the rugged, road-ready portable version, the Z/IP Mixer, at the National Association of Broadcasters Convention in Las Vegas, April 20-23, in booth N7620.

The new 2RU studio rack-mount Zephyr/IP provides broadcasters with the same packed feature-set as its predecessor, in a smaller, more compact frame-size. The Zephyr/IP, or Z/IP, produces superior audio for two-way applications over uncontrolled IP networks and mobile phone data services by dynamically adapting to the network and minimizing the effects of packet loss and jitter. It combines dynamic buffering, auto-varying bitrate functions, and the new AAC-ELD codec. AAC-ELD produces excellent fidelity at low bitrates with nearly inaudible loss concealment.

The Z/IP Mixer combines the versatility of the Zephyr/IP with the utility of a digital four-channel stereo mixer, all in a rugged, road-ready portable chassis.

All Z/IP models are wireless capable and can connect to IP networks via Wi-Fi, EVDO, and UMTS. They're Livewire™ ready, and can even register and accept calls from compatible PBXs. We even provide a free service to help you overcome troublesome firewalls and NATs, as well as easily connect to other Z/IPs.

For media information, contact Angi Roberson at angi@telos-systems.com, or call +1-216-241-7225. To learn more about the Zephyr/IP visit www.Telos-Systems.com/ZephyrIP. Press ready photos are available at www.telos-systems.com/press-gallery/.

Telos Systems, headquartered in Cleveland, Ohio with offices in Europe, is a leading manufacturer of ISDN, coded audio and telephone interface products for talk-shows, teleconferencing, audio production, remote broadcasts, and intercom applications.
