TELOS INTRODUCES STUDIO CONTROL SURFACE SmartSurface provides expanded control of radio studio functions.

LAS VEGAS, Nevada, April 23, 2001 — Telos Systems, Cleveland, USA-based manufacturers of DSP-based broadcast studio equipment, has unveiled the new SmartSurface studio control surface at the NAB Convention in Las Vegas.

SmartSurface is a control system designed to exploit the capabilities of today's leading mixing/routing engines and computer-based audio applications. Bearing a slight resemblance to traditional on-air consoles, SmartSurface provides many familiar controls to operators, while providing new functions. By integrating management of most devices used in the radio studio during on-air or production activities, near-complete control is provided for mixing, routing, playback, recording, editing, phone control, remote (codec) operation and more.

"SmartSurface is designed to fully exploit the power and capabilities of today's most advanced digital audio routing and mixing engines and pc-based audio applications," says Telos Systems Managing Director Michael Dosch, "while providing a more flexible and intuitive operator interface for fast-paced radio shows."

Find out more about SmartSurface by browsing www.telos-systems.com, or visit Telos at the NAB April 23-26, Booth R2263, Las Vegas Convention Center.

#

Telos Systems, with headquarters located in Cleveland, Ohio, and offices in Baltimore, Maryland; San Diego, California; and Freising, Germany is a leading manufacturer of ISDN, digital network and telephone interface products for talk-show programming, call-in radio segments, teleconferencing, audio production, remote broadcasts, and intercom applications.

Omnia, a Telos company, is world-renowned for its innovative digital audio signal processing expertise. Its family of digital audio processors for FM, AM, TV, DAB, Internet, and broadcast audio production are setting new standards for audio quality in the broadcast and Internet industries worldwide.
