

Headsets for use with the Telos Desktop Director

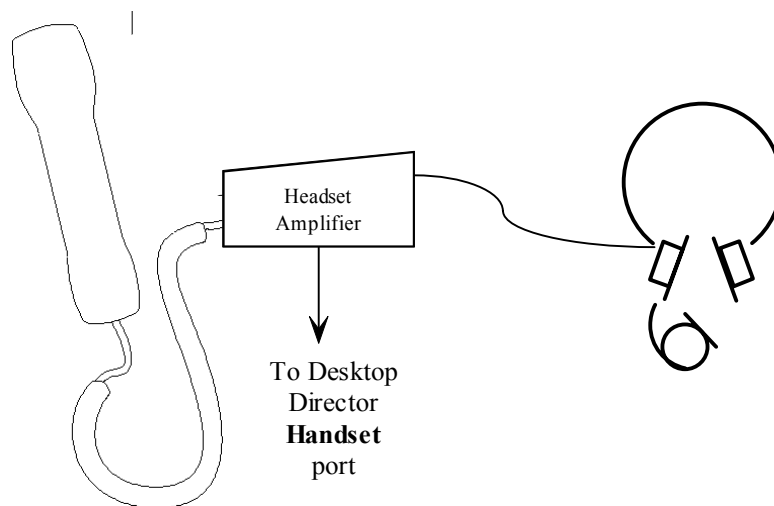

10 July, 2003

Common “Universal” Headsets

A number of parties offer headsets that work with any telephone in conjunction with an external amplifier interface. Any of these can be used with the Telos Desktop Director. These are made by a number of manufacturers including *Hello Direct*, *Nortel*, *Plantronics*, *GN Netcom*, *Clearvox*, and many others. Check with your favorite retailer for details.

To use a headset with an external amplifier, simply disconnect the Desktop Director’s handset cord from the Desktop Director, and connect the amplifier in its place. Next, connect the handset’s cord to the amplifier. Finally, connect the headset to the amplifier. Follow the manufacturer’s instructions for configuring the amplifier. If the instructions refer to specific brands of phones, use the settings for the “Mitel Superset 4000 series”.

The complete hookup will be similar to the following:

Direct Connection Headsets

The Telos Desktop Director has, in addition to the handset jack, a jack for direct connection of a headset. Whenever a suitable headset is connected to this jack, the

microphone of the handset will be muted. This jack is engineered to be compatible with the direct-connect headset jacks on Mitel Superset series 4000 telephones. Any headset designed for direct connection to a Mitel Superset series 4000 telephone should work when connected directly to the Desktop Director in this manner.

To connect a direct-connect headset to the Telos Desktop Director simple attach the headset to the modular jack on the Director labeled with a headset. This will disable the microphone on the Desktop Director's handset.

The following direct-connect headsets have been tested with the Desktop Director:

<i>Plantronics Model</i>	<i>Description</i>	<i>Part Number</i>
P51-U10P	Plantronics Supra Polaris monaural unamplified	26591-12
P51N-U10P	Plantronics Supra Polaris monaural unamplified with noise canceling microphone	26595-02
